B.PILKINGTON NURSERYMAN'S Leveriment of Agriculture. PRICE LIST No. 29

SEASON PORTLAND. **FALL 1929** OREGON **SPRING 1930**

INFORMATION

PRICES for the fall 1929—spring 1930 season are covered by this List No. 29, which cancels all former catalogs. Net f. o. b. Portland or nursery shipping station. Remittance with order unless terms are previously arranged.

LOCATION—City display and sales grounds and office, 220 Second Street, corner Salmon, phone Atwater 1927. Nurseries at Durham, Oregon Electric Railway, 11 miles south. By auto from Portland, out Sixth Street, Terwilliger Boulevard and Newberg Highway, about 8 miles to Red Rock Cheese Factory, turn to left and keep straight ahead about 3 miles. Visitors welcome at the nurseries and display grounds.

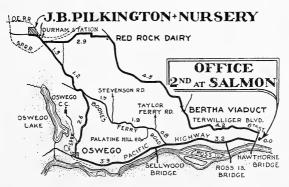

CALIFORNIA BRANCH—Demand for our hardy stock has grown to such extent that an agency branch was necessary, and we have established display and sales grounds on Main Highway, 16 miles south of San Francisco, three miles north of Burlingame, Post Office address, J. B. PILKINGTON, Nurseryman, MILLBRAE, CALIF.

A large supply of select specimen Evergreens (Conifers), Broad Leaf and Deciduous Flowering Shrubs, Shade Trees, Vines and Plants are ready at all seasons and personal inspection and selection are earnestly solicited.

PLANTING SEASON—Usually from late October to early April, right through the winter, depending of course upon weather. Early planting is advisable—at any rate, place orders early so that selections made be reserved for delivery or shipment at any time desired.

GUARANTEE—We have been in the nursery business in Portland for 40 years. All plants shall be true to name, well grown and properly dug and packed and delivered to the transportation company in good order, after which our responsibility ceases. We assume no responsibility for failure due to after conditions over which we have no control. In case any plant through error prove untrue to name, we will replace without charge or refund not more than the original purchase price.

LANDSCAPE DEPARTMENT—Fully equipped and under trained and competent management, will make complete plans and specifications for the landscape operations of small or large estates. Simple planting suggestions for home grounds are made without charge, but where landscape problems require special visits, plans, specifications and draughting, study and so on, a reasonable charge must be made, consistent with the time and services rendered. We will be glad to go fully into detail with those who are interested in this.

BUILDING DONE-RESIDENCE EAST 14TH N. AT STANTON

BROAD LEAVED EVERGREEN TREES AND SHRUBS

The great beauty of the broad leaved evergreens, makes them most valuable for gardening purposes. Many are among our most spectacular and gorgeous flowering shrubs, while their broad, attractive leaves show out most effectively during the parts of the year when many trees and plants are without foliage. There is practically no end to the charming results that can be obtained by the liberal use of this class of plants, either as single specimens or in masses as well as both background and foreground—for the somber winter picture or the summer floral display. They generally thrive in shady or partially shaded places, giving finest foliage effects when so grown—with better flowers perhaps when grown in the sun.

Our climatic conditions in the Pacific Northwest are particularly congenial to this class of shrubbery and aid in obtaining wonderfully pleasing effects in foliage and flowers. Our Oregon State Flower, Oregon Grape (Mahonia Aquifolium) and the state of Washington's choice of the native Rhododendron prove conclusively the esteem in which they are held. My stock of these is particularly fine, home grown, thoroughly acclimated, and good results can be depended upon.

BUNGALOW PLANTING EAST 16TH STREET N. AT SKIDMORE Cotoneaster Horizontalis in foreground; Retinospora Obtusa Aurea, Golden Japanese Cypress at porch pillars

Cotoneaster-

As a family, they cannot be overestimated, furnishing variety of foliage and habit that makes them favorites in landscape planting. Not entirely evergreen, they are so persistent in foliage that they are commonly classed as such. All flower pinkish white in spring, but their main beauty is in the masses of red or orange red berries carried through fall and winter. Simonsii or Shining Leaf is upright, tall, orange red berries, fine for background. Franchetti is tall but graceful drooping habit, fine foliage, usually evergreen, with masses of berries. Horizontalis is very hardy, flat or creeping growth, drops its foliage but loads up with red berries making bright color spots in winter. Microphylla is more tender, but evergreen small leaves, dark and glossy, spreading drooping habit making it fine for tops of walls, banks, etc.

Adpressa, trailing, dwarf, fine for rockeries. 12-15	1.00

KALMIA FLOWERS—"MOUNTAIN LAUREL OR CALICO BUSH"

AN IRVINGTON RESIDENCE, THOMPSON ST. AT EAST 32ND Note the plant bordered entrance steps, Veronica, Abelia and Cotoneaster. Pyramidal Japanese Cypress against chimney and Lawson Cypress at corner of house. Planting limited to foundations and borders, leaving open lawn

Laurus (Prunus) Laurels and Laurustinus—

Well enough known in the Pacific Northwest to omit description. Large growing shrubs with glossy, everygreen foliage useful as specimens, in masses and for evergreen hedges. Laurustinus "Winter Flowering Laurel" blooms in late winter, large umbels of pink and white flowers especially welcome at that season. The others are more valued for foliage than flowers.

Peat Moss (Torf Mull)—Humus in available form, indispensable for mulching rose and flower beds, in rock gardens. Ask for descriptive pamphlet.

ENGLISH HOLLY

Specimen at 11th and Schuyler Sts. A most satisfactory specimen tree, always attractive for its waxy, evergreen foliage and bright red berries during the Fall and Winter. Also makes excellent thick evergreen hedge.

Also profitable when planted for commercial purposes. The demand during Xmas Holidays for the cut branches, with their beautiful waxy leaves intermingled with brilliant crimson berries, is always hard to supply, even at good prices.

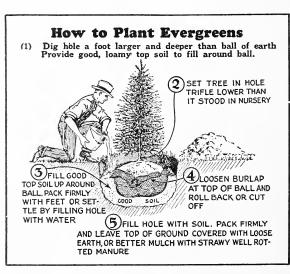

BASE PLANTING STUCCO HOUSE, E. 30TH N. AT THOMPSON Japan Cypresses at entrance, Firethorn at chimney, Cypress at corner

PRUNING OF TREES AND SHRUBS

Deciduous trees and shrubs should be given a severe cutting-back or pruning when transplanted. More or less roots are always bruised and broken during transplanting, and all such should be trimmed off with pruning shears or a sharp knife, as the bark cannot heal over a rough wound. In order to insure a strong and healthy growth, as well as to cause the plant to become bushy or attain any desired shape, it is well to cut off from each branch one-third to one-half of the previous summer's growth. Fruit trees respond especially to free pruning at the time of transplanting.

The matter of when and how to prune established shrubs and trees depends upon their habits and the purpose for which the operation is performed. Shrubs that bloom early in the spring form their flower-buds during the preceding summer, and they should, therefore, not be pruned until immediately after flowering, if their flowering is to be preserved. Late-blooming shrubs flower on wood of the same season's growth, and should be pruned while dormant, in late winter or very early spring. One-third the previous season's growth may be removed. Shrubs planted in masses should be pruned regularly to induce a dense growth, and to prevent individual plants from becoming too tall, with unsightly, open branches.

The shearing or trimming of hedges should never be done later than July 1, as late cutting allows a tender new growth, which does not have time to ripen properly and consequently is liable to winter-kill. The shearing of individual shrubs to form flat topped, globe, pyramidal, or other unnatural-shaped specimens, should, as a general rule, be avoided.

ON GRAPE—OUR STATE FLOWER—HARDY E GREEN—USEFUL AS SPECIMENS, IN MASSES OR IN HEDGES OREGON

Ligustrum, Evergreen Privet—
Lucidum or Shining Leaved Privet is one of the attractive evergreen shrubs. Good size, upright spreading habit, exceptionally fine leathery, dark rich green foliage, miniature lilac-like flowers in June and followed by long upright racemes of dark purplish black berries carried

foliage both summer and winter, they flower bright yellow in spring and bear an abundance of attractive bluish-black berries in summer and fall. Remember they are entirely hardy and plant more of them, as well as other Berberis. 1.00

A GRACEFUL DROOPING HIMALAYAN CEDAR

CONIFERS-EVERGREEN TREES

These are largely used as specimen lawn trees, in pairs to mark walks and entrances, for massing, windbreaks, screens, hedges and as backgrounds for planting flowering shrubs and trees, and of late years for foundation plantings around house or buildings especially at corners. Many associate the word "evergreens" with simply cedar or our native fir trees without realizing the diversity of color and form which can be had in these, ranging from every shade of green and blue foliage to garnet and yellow, golden, silver and white tipped, giving even summer tints to the desolate winter landscape.

Always dug with ball of earth and burlapped. We transplant and root prune them frequently, which practically insures successful transplanting, even of the larger specimens of which we have a limited number of large size specimens from 4 to 8 feet high in Abies, Cicilica, Concolor and Nordmanniana; Lawson's Cypress; White, Englemann's, Norway and Colorado Blue Spruces, and will gladly make special quotation upon any in which you may be interested.

Abies (Firs)-

A class of rapid growing trees of extreme hardiness and thriving in exposed situations. They are of great decorative value but need plenty of space for their best development.

NATIVE PORT ORFORD CEDAR—LAWSON CYPRESS AT STATE CAPITOL

EUROPEAN WHITE BIRCH, PYRAMIDAL ARBOR VITAE, BOSTON IVY ON CHIMNEY HARDY SLENDER EVERGREEN

DECIDUOUS ORNAMENTAL TREES

The following list of deciduous trees (those that lose their leaves in autumn) embraces a selection for all purposes. For street planting, the Norway Maple probably leads in general suitability, with several other varieties of Maples, Elms, Birches, Horse Chestnuts, Tulips, Mountain Ash and others, all favorites; while for lawn and park planting this varied list covers trees of every characteristic in outline and habit, color of foliage and floral diversity.

These trees have been grown from seedlings in my nursery, have been transplanted each a number of times, according to size, will transplant readily and take vigorous hold and grow well when moved to permanent locations. Prices are for different sized trees, and in all cases good value will be given, according to price charged.

As a street or curb tree, Norway Maple easily holds first choice. Park departments, city foresters and landscape architects unite in giving it first position, as it easily combines the greatest number of desirable qualities, it withstands extremes of drought and excessive moisture, does not lift or break sidewalks or curbs thriving in limited soil, of clean, upright and rather compact growth, not affected by city smoke or gases, and holding its foliage late, then dropping its leaves in a comparatively short space, making labor of cleaning up in the fall of little effort. For a small flowering tree for curb or in lawn Pauls Double Scarlet Hawthorne probably is first favorite.

MOUNTAIN ASH BERRIES-ROWAN TREE

SPIREA VAN HOUTTEI—VAN HOUTTE'S BRIDAL WREATH One of the most satisfactory and showy of the really hardy shrubs. Plant in rows, groups or singly

DECIDUOUS ORNAMENTAL SHRUBS

Flowering shrubs take predominance in all plans for landscape decoration, grounds large or small. Without shrubbery no landscape can be created, but with a careful selection, properly planted, any property can be enhanced in beauty and value. If care is given in selecting, flowers can be had from early spring to late fall. It is my aim to produce everything in flowering shrubbery that is useful, hardy, and worthy of cultivation in this climate. I have been bringing in, trying out and rejecting different shrubs for many years past, adding to my list only those of proven merit in the Pacific Northwest. My stock is large, well grown, every plant being bushy and well furnished in proportion to its height and with exceptionally fine root system. Where no sizes are quoted, prices are for large, well grown shrubs, that will give immediate effect and flower the first year after planting.

Azaleas are the most showy and gorgeous of dwarf and

Azaleas are the most showy and gorgeous of dwarf and medium growth shrubs, effective when planted with other shrubs, they are even more so when massed. The Southern Oregon is our finest native shrub, growing to large size in time, flowering in large clusters, white or light rose, fragrant in late May. The Evergreen Crimson, which we introduced years ago from Japan, and which we propagate in quantity since the federal embargo stopped importations, is dwarf in habit, light delicate glossy foliage in spring and bright purplish garnet in winter, flowering dazzling crimson in spring. Azalea Alta-Clarence has large foliage, deciduous, taking on wonderful autumnal colors, and masses of bright yellow flowers in spring.

SPIREA—VAN HOUTTE'S BRIDAL WREATH Adaptable Everywhere

Spirea (Spiraea)-

The Spireas as a family are easily the first favorites in deciduous shrubs. Anthony Waterer is a dwarfish bushy plant of attractive foliage, flowering reddish pink and fading to light pink, blooming over a long period in late spring and summer. Thunbergi (Japanese) is one of the first white flowers in early spring and one of the last to lose its foliage in December. Ideal for base planting and massing about the house, and Van Houtte's Bridal Wreath with its masses of drooping white flowers in May and June is probably the most extensively planted flowering shrub in America, thriving everywhere. Aitchisoni is very tall, with Mountain Ash like foliage and long spikes of creamy white flowers suitable for tall background and mass planting. Prunifolia Flore Pleno, the true Bridal Wreath is fine in flower and especially good for its rich autumn foliage.

WISTARIA COVERED BUNGALOW E. 37TH N. ATTILLAMOOK Evergreen Darwin's Barberry close clipped for hedge, but equally good as specimens and in groups

HARDY VINES AND CLIMBERS

The need of vines and creepers for home embellishment is well known, as nothing adds more grace and beauty to the exterior of the house than well-placed and appropriate vines. They cover porches and pergolas, give shade, comfort, perfume and flowers. A porch without a vine always appears desolate and incomplete. Also invaluable for converting offensive looking fences or other unsightly features into things of beauty. In shaded places and beneath old trees where grass will not grow they are often used as a ground cover. On steep slopes and banks they prevent erosion. Churches, depots, factories, outbuildings and all brick and stone edifices can be covered by clinging vines, without trellis work, that will relieve their harshness or lack of architectural beauty and make them things of beauty and joy forever.

Wistaria-

Strong-growing, free-flowering climbers. They are hardy and ornamental, but require deep, rich soils and the occasional use of fertilizers, to obtain best results. When well established, a greater abundance of the lovely flowers can be had by rather severe pruning, cutting back the lateral shoots to short spurs and heading back the leaders conveniently, taking care, however, not to over-do it. The grafted Japanese varieties are strongly recommended as superior to the seedlings.

The new Pink Wistaria was grafted with scions of a fine bright pink, long full panicles, from a notable Pasadena garden. We are propagating it locally and have strong

thrifty plants for this season.

Wistaria-Multijuga, Japanese Wistaria, grafted purple	1.50
Multijuga Alba, White Japanese, grafted	1.50
Multijuga, Huntington's Pink, new	2.50

The planting of trees and shrubbery is not an expense for they enhance real estate values, which makes their purchase a safe and sure investment.

Peat Moss (Torf Mull)—Humus in available form, the greatest of soil conditioners. We are Oregon Distributors of G. P. M. brand, imported from Europe, cheapest and best on the market. Ask for descriptive pamphlet and price list.

HEDGE OF EVERGREEN ENGLISH LAUREL E. 17 N. & KNOTT One of our best hardy evergreens for hedges, foundation or group plantings. Supplied in many sizes, listed page 7

HEDGE PLANTS AND LIVE FENCES

The garden craftsman, if he is a true artist, will let Nature make his fences. Old dead walls and stiff fences are becoming obsolete among people of good taste. Anyone who has seen a rightly kept hedge of Privet, English Laurel, Oregon Grape, Holly or Roses, knows what an important

feature it is in making truly beautiful grounds.

For medium-sized formal hedges the Privet is probably the most satisfactory—a good grower, responds readily to the pruning knife; is the most economical in cost, perfectly hardy, and practically an evergreen with us. English Laurel and Lawson's Cypress are also fine for formal sheared hedges. For the high hedges, screens or windbreaks, Norway Spruce, Lawson Cypress and the Hemlock are all desirable; the Norway Spruce especially being sturdy, fast-growing and very handsome. These conifers are best pruned

or sheared just as new growth starts in spring.

For the untrimmed hedges—those allowed to grow naturally with but little or no pruning, and which in many localities are now a favorite means of enclosing flower and vegetable gardens, edging terraces and defining roads and walks, covering unsightly defensive barb wire or picket fences—nearly any free-growing shrub can be used, such as Spireas, Van Houttes or Thunbergi, Oregon Grape, Abelia, English Laurel, Laurustinus, Cotoneasters and many others.

Boxwood is increasing in popularity, both the dwarf used for formal borders and edgings, and the tree or bush box for large size permanent hedges. Boxwood is priced on page 3 and illustrated on page 10.

IRIS FLOWERS

PERENNIALS AND HARDY FLOWERS

Beautiful, hardy plants, that will flower year after year without replanting each spring or fall, are growing into popular favor, and the so-called "old-fashioned garden" is to be found everywhere.

The pleasures from a garden of such flowers planted by itself or especially when grouped in front of or among taller growing, hardy permanent shrubbery, cannot be fully described; caring for them is a change and relaxation. They require no skilled or heavy labor, and repay gloriously the attention bestowed upon them.

The following list covers plants that have proven satisfactory in the Northwest. My aim is to supply the best quality of strong, field-grown stock that will give immediate results.

Fall is the best time for planting Peonies, Japanese Lilies, Iris, etc., though they, and all perennials, can be planted any time until late spring, but best results are to be

had from early planting.

Strong, Field Grown Clumps that give satisfaction.

MADAM CAROLINE TESTOUT ROSES ON PORTLAND STREET

ROSES

Strong Field Grown Two-Year-Old Plants That Give Results

Abbreviations used in descriptions are: H. P., Hybrid Perpetual—vigorous, hardy, flowering in Spring and Fall; require less care and attention than other classes. H. T., Hybrid Tea—more vigorous in growth, free flowering, fine colors; the most satisfactory class for the Pacific Northwest. T., Tea or Everblooming—less vigorous, more tender, finest of flowers. Poly., Polyanthus—fine class of small flowered climbers or pillar roses. Noi., Noisette—rather tender climbers, flowers usually in clusters. G. M., Gold Medal—the Highest Award of Merit given by the National Rose Society of England. Pert, Pernet—Ducher Austrian Briar Hybrids.

These plants are large for mailing unless cut back, though they can be sent this way if desired, in which case add 10 cents for single plants for postage; 20 cents for six, and 30 cents per dozen, in Oregon and Washington, points more distant pay a little more. We pack securely for shipment by express anywhere without extra charge, purchaser paying express charges, which are very light on

nursery stock of all kinds.

Brief Cultural Instructions

PLANTING.—If the situation be not too much exposed where the Roses are to be set out, we prefer fall planting for all hardy kinds. Dormant plants set out in the spring should be planted early, for no plant suffers more from being set out late than the Rose. The plants should be put in friable, rich soil, and firmly pressed in with the foot, taking care not to bruise the roots. Budded roses should be planted sufficiently deep, so that the junction of the bud with the stock is from two to three inches below the surface of the earth. We cannot too forcibly direct attention to the above rule.

PRUNING.—This operation is best performed during March. Most Roses do better if moderately pruned; some sorts require two-thirds of the past year's growth removed; for others to remove one-half or one-third is sufficient. All must be more or less pruned when planted; do not neglect this. As a general rule, the more vigorous the variety the less it should be pruned. All weak or decayed wood should be entirely cut out, and also any shoots that crowd the plant, and prevent free entrance of light and air. Besides spring pruning, many kinds Hybrid Perpetuals require to be pruned as soon as their first blooming is over, in order to induce a free display of flowers in autumn.

ROSES IN NURSERY ROW, GROWN WITHOUT IRRIGATION, PHOTO IN JULY

PROTECTION.—All Roses would be better for a light covering. This may be done by hilling up with earth; or better, by strewing leaves or straw lightly over the plants and securing them with evergreen branches, oftentimes the latter are in themselves sufficient.

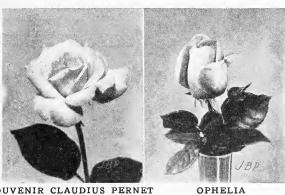

INSECTS.—If proper attention is paid to soil, planting, watering, etc., and a few simple directions heeded, you will not often be greatly troubled. The aphis is among the most annoying foes, and particularly infests plants in houses; healthy plants in the garden are but little liable to its attacks. They can be exterminated by dusting the plants with tobacco dust while they are wet with dew, or by spraying with water in which tobacco stems or leaves have been steeped.

DISTANCE FOR PLANTING.—Distances apart for planting roses are regulated somewhat by the varieties used. Hybrid Perpetuals, Hybrid Teas and other strong growing kinds may be set three feet apart, and Teas from two to two and one-half feet apart. In planting several varieties in one bed, the stronger growing kinds should be placed in the center, or if in borders, they should be set back of the weaker growing kinds.

Late Introductions — Novelties

Late Introductions — Novettles	
Twelve plants for the price of ten.	Each
Angele Pernet, H. T., awarded Gold Medal, Bagatelle,	
1924, one of the most striking novelties; color vivid	
orange yellow shaded fiery deep reddish apricot,	
"tango color" covers it. Good grower, long buds	
that open to medium full, fragrant flower	1.50
Betty Uprichard, H. T., G. M., flowing carmine with	
orange copper at base of petals, upright growth,	
good form	.75
Cuba, H. T., dazzling, vermillion, scarlet overlying an	1.05
orange ground, semi-double, vigorous	1.25
Dame Edith Helen, H. T., G. M., large, full, double	1 50
flower of brilliant but soft pink, extra good	1.50

Silver Moon, Wich., a grand single petaled climber, pure white with yellow stamens, fine foliage	.60
Tausendschon Poly soft pink in large clusters good	50

FRUITS

The list of Fruit Trees we offer is carefully selected, for commercial and Home Orchard planting. We aim to grow the best varieties of each species and have eliminated as far as possible the undesirable kinds, for we wish our patrons to feel sure that they can be sure of obtaining varieties of proven merit. We are growers of general nursery stock and not merely dealers. Our soil is a loam that produces an exceptionally good fibrous root system that insures success in transplanting. Grown right, handled properly, sold direct with no agent's commission. The planter gets the benefit.
